

Xi (Jessie) Ji

HCI / Interaction Design Researcher

2433039@tongji.edu.cn · ORCID: 0009-0007-6290-6624

Research Interests

Human–AI Interaction · Design Practice · Empirical HCI

My research interests lie at the intersection of Human–AI Interaction and design practice, with a focus on how generative and agentic AI are changing the ways designers express, explore, evaluate, and revise design ideas. I am particularly interested in how AI coding agents and executable prototypes reshape design practices, interaction with design materials, and designers' agency and control.

Selected Research & Publications

Designing with Vibe Coding: How Designers Express, Evaluate, and Revise Executable Prototypes

Xi Ji, Yu Shu, Preben Hansen

CHI 2027 — Submitted

Empirical qualitative study with 25 UX/UI designers examining how designers express design intentions, evaluate executable prototypes, and iteratively revise design ideas when working with AI coding agents.

Education

Tongji University

M.A./M.Des. in Design, Intelligent Media Interaction

September 2024–Present

Shanghai, China

Communication University of China

B.A. in Visual Communication Design

September 2020–June 2024

Beijing, China

Experience

SAIC IM Motors

UX/UI Design Intern

22 June 2026–Present

- Designed interaction flows and interface presentations for B2B AI-agent products, including AIC Material DVP, the Mold Cost Budget Assessment Agent (“Xiaotudi”), and a regulatory intelligence agent.
- Designed UX/UI and interactive prototypes for these products, translating complex enterprise workflows and domain-specific tasks into clear interaction structures and interface experiences.
- Implemented front-end interfaces connected to backend services, using AI coding tools to translate interaction designs into executable product interfaces and iterate directly on working implementations.
